

TULANE STUDIES IN GEOLOGY is devoted primarily to the geology and paleontology of the coasts and adjacent land areas of the Gulf of Mexico and the Caribbean Sea. Each number is issued separately and contains an individual monographic study, or several minor studies. As volumes are completed, title pages and tables of contents will be distributed to subscribers and institutions exchanging the entire series.

Manuscripts submitted for publication are evaluated by the editor and by an editorial committee selected for each paper. Contributors need not be members of the Tulane University faculty.

Manuscripts should be submitted on good paper, as original typewritten copy, double-spaced and carefully corrected. Two carbon copies in addition to the original will help expedite editing and assure more rapid publication.

The cost of excessive illustrations and tabular matter may be charged to the author, and will be computed on the cost above that of a normal 10-point page of text.

An abstract not exceeding three percent of the length of the original article must accompany each manuscript submitted. This will be transmitted to any abstracting journal specified by the writer.

Separate numbers or volumes may be purchased by individuals. Subscriptions are not accepted from institutions publishing comparable series; exchange agreements are invited. Authors may obtain copies for personal use at cost.

Address all communications concerning manuscripts and editorial matters, subscriptions, and orders for individual numbers to the editor. Address exchange inquiries to the associate editor.

When citing this series, authors are requested to use the following abbreviations:  
*Tulane Stud. Geol.*

Price for this number, \$2.75.
